/this Rabel?:/ The first airdrop of relief food was carried out on 13 February 1985 near Rabel, a village situated on a high plateau about 250 km north-east of Addis Abeba. "RRC agreed to the airdrop and gradually became a strong supporter of the operation which utilised a new airdropping technique developed in the United States. The grain was rebagged into double or triple sacks containing 25 kg each and placed on wooden pallets which were dropped from a height of 6 to 10 metres above the ground. No parachutes were used. The RAF planes, making four flights a day, carried 16-17 tonnes, and the Transall planes, which flew three daily flights, eight tonnes on each drop. The technique was called 'heavy free drop' and the drop zones had to be carefully selected to find a level surface and enough manoeuvring space between the hilltops to make the highly precise drops. The drop zones also needed to be sufficiently close to groups of villages so that the grain could be carried to distribution points and to the homes of the famine victims. The operation was called Tesfa ('hope' in Amharic) -- The procedure was very exacting. The pallets, 16 in the RAF plane and eight in the Luftwaffe plane, were pre-positioned on a set of rails fitted with small steel rollers, ready to be pushed out. The plane first made a dry run over the drop zone to be sure everything was in order. Then followed a loop around the plateau and an approach to the drop zone where, at a signal from the pilot, the pallets were pushed out, one on each approach. The crew handling the pallets were secured by attachment to a rail running along the sides of the plane. When the drops had been completed hundreds of people, supervised by RRC officials, rushed down a slope, picked up the bags and carried them to a collection point nearby. Every single grain on the ground as a result of damaged bags was collected. Two Polish helicopters, carrying a British ground party of two or three men and members of an Italian medical team, were the first to fly out each day to select and prepare the drop zone."

[Jansson et al 1987 p 40-41]

Observers were flown to the area in Polish helicopters to see how British and West German transport planes dropped sacks of grain as famine relief.

[UNDRO News, Jan/Feb 1985 p 5]

Around 20 January 1990 ENA news agency said that government forces had recaptured Rabel from the TPLF.

| 1936 | Ras Imru had a young man of 22 years by name Yohani | nes whom | he seemed to trust. |
| | In the beginning of February 1936 Yohannes had heard | | |
| | | | |

were stationed at Rama, at least 50 km behind the war front, so they were not guarded. Yohannes started with about 300 soldiers and by moving about 70 km in darkness they reached Rama at 4 o'clock in the morning. All the about 500 workers were asleep. The wild soldiers of Yohannes shot or cut dead everybody they could hit. Only the engineer was armed and he defended himself and his wife and little daughter like a lion. When he had only three cartridges left, he shot his child, his wife and himself. His local nursemaid was killed by the soldiers.

Some 80 Italian workers had been murdered. The others fled to the forest and escaped, save four of them who were taken prisoners. However, the Gojjam force was also punished because a store of dynamite blew up and killed many of them. When it came to plundering the camp they started quarrelling and shooting each other. Those 95 who were left at the end mutilated the dead men and even the two dead women.

"Everybody loathed what had happened. It was the last time that mutilation occurred on the Ethiopian side of that front."

[H Nyström, Med S:t Ghiorghis .., Sthlm 1937 p 114-115]

1950s In late 1959 injera was baked and distributed as food aid from the Mekane Yesus Church.

1960s A clinic built by the ESIBT Field Activities ("Building College") was handed over to the American Lutheran Mission on 11 December 1965.

The primary school (in Adwa awraja) in 1968 had 118 boys and 58 girls, with 4 teachers.

1970s An elementary school building constructed of concrete elements and with Swedish assistance through ESBU was completed around 1970.

[SIDA 1971]

Situated at 7 km from the Eritrean border, which in the late 1990s becomes closed at sunset. The bridge which was destroyed during the recent war has been reconstructed. [Äthiopien 1999 p 372]

2000s Still by December 2002 when 98 Ethiopian civilians were repatriated from Eritrea, they were escorted by delegates of the International Committee of the Red Cross (ICRC) inside Eritrea from Adi Quala to the border, and then inside Ethiopia by other ICRC delegates from the border to Rama.

Valley in the Chercher area with affluents Jaja, Waju, Soka, Lagagaba, Kotu. The Pre-Cambrian rocks show various degrees of metamorphism and habitus. It is possible to distinguish many types of concordant faulted rocks which form zones from northwest to southeast.

Lead minerals occur in a small 5 km long valley joining the Ramis river near Wolde Ramis.

Graphite schist is found rather south in the Ramis valley, but the graphite content is usually low in the region.

The Ramis valley contains among the largest reserves of marble in the Chercher area. [Mineral 1966]

1900s The hunter Powell-Cotton was in the area in June-July 1900 and shot several ibex.

1950s A radiometric reconnaissance flight was made by Towle in 1955 and it included a tour around the top of Ras Dashen.

No anomalous radioactivity was detected.

[Mineral 1966]

1960s

At Ras Dashen, highest mountain in Ethiopia, the only cultivated plants are wheat, barley, rye, and flax-seed, and this is at an elevation of about 3,350 m and not at the peak. [Simoons 1960]

A group of Japanese who had scaled Ras Dashen were received by the Emperor in the capital on 1 June 1966. Similarly, a Polish group was received on 25 February 1969, and 14 Bulgarian alpinists were received on 8 April 1969. The Polish team took about 12,000 still pictures and three short films during their expedition. [News]

"At 10.30 /on 15 January 1967/ a short, steep climb brought us to a wide pass from which Ras Dashan was visible. It is a most unassuming mountain - merely a long ridge of rock on which one point is slightly higher than the rest - and without a guide one could never pick it out from amongst the many other mountains that here sprawl gloriously against the sky."

"Mike was looking ill, but he doggedly tackled the next lap - a long walk around spur after spur, across sunny slopes of golden turf dotted with two-foot lobelias. (The higher the altitude the lower the lobelia.) Between these level stretches there were a few muscle-and lung-straining climbs and by midday thirst was tormenting me -- Foolishly, I had left my water-bottle in camp, not realising that above river-level all streams would be frozen. (They were a very beautiful sight - gleaming tongues of ice hanging from the mouths of dark caverns near the summit of every mountain.)"

"By one o'clock an exhausting climb had taken us on to the Ras Dashan plateau, where the path skirts the western flank of the summit ridge and swings around to run parallel with the ridge on its southern side, across a wide, bleak plain littered with chunks of rough volcanic rocks. Half-an-hour later the mule was tethered to a stone and we were led off the track towards the established route to the summit. The incline was easy, yet at this height our clamberings over rock-slabs and massive boulders felt strenous enough, and we spent twenty minutes covering that last half-mile. Then a real climb of some fifty feet took us to the highest point in Ethiopia -- I crawled on to the summit, feeling very like a fly that had just been sprayed with D.D.T."

"Twenty minutes later, when we had decided that Mike must have turned back, Ian suddenly glimpsed him in the distance, wandering away both from us and the mule. No one in a normal state could possibly go astray on that plain, with Ras Dashan to guide them, and as we scrambled down from the summit Mike's gait changed to a wavering stumble - so while Ian went straight to him -- I continued south-west to the pass - unable to repress a selfish joy at being briefly alone with Ras Dashan --"

"As we lost height Mike recovered rapidly, and told us that while wandering on the plain he had 'seen things' and heard voices calling from the wrong direction. I hadn't known that these classic symptoms of mountain-sickness could develop at such a comparatively low altitude."

[Dervla Murphy, In Ethiopia with a mule, 1969 p 110-111 (1994 p 113-115)]

There are three distinct points, and most trekkers head for the one on the left (when starting from the village of Ambikwa). It takes about 2-3 hours to reach from one peak to another of the three.

[Lonely planet 2000 p 182]

Ras Dashen is outside the Simen National Park, to the east. [Camerapix]

From an excursion in 1985: The road started at Shewa Robit and wound around through the hills south-east of Geweha. It was dirt and full of rocks and ruts. We went through an area called Rasa where the fields looked rich and full of teff and sorghum, until we arrived at the last village of the Amharas. Gradually we descended a gentle slope and there in the distance was a great valley - the Rift Valley and land of the Afar.

[P M Sutton, Ethiopian journal, USA 1986 p 156]

J.... Rasa Goba sub-district (Rasagoba ..) 10/40 [Ad]

(centre in 1964 = Borerie)

The Rasa Goba primary school (in Yifat & Timuga awraja) in 1968 had 33 boys and 8 girls in grades 1-2, with one teacher.

"We left Magu, and came to the foot of Mounta Ayelu. -- Presently trees began to clothe the banks of the river again, and on coming to a large and shady group of them we decided to call a halt. The place was known as Rasdaza."

The travellers hunted hippopotamus in the river and suceeded to shoot three animals. The local Danakil were very happy for this. "They now had a greater stock of meat perhaps than they had ever had before, for their own rifles and ammunition were practically useless."

Elderly men visited Nesbitt's camp from the opposite bank where they had their huts. There was only one woman among the visitors, a daughter of one of the elders. "Her name was Aysha, and I wish I could have spoken her language."

JEP54 Realu (plain)

13/41 [Ne]

"On making another detour, we came to a place where the upturned stones had been cemented again by a new lava-flow. This had formed a level floor, out of which the older stones protruded like decaying tombstones, set at all angles. Between these latter we threaded our way, bruising and cutting our elbows and knees against them. The camels suffered far more than we did, for it was terribly difficult for such ungainly animals to pass through the narrow spaces between the stones without coming into contact with them."

"Presently we came to yet another cliff, which overlooked the Realu Plain, to the southeast of Mount Afdera. The southern flank of the great volcano consisted of five successive steps, pointing to the occurrence of five separate eruptions, each one slightly less copious than the one which preceded it. At the apex was a small truncated cone which looked like a toy placed on that huge massif."

11/37

[n]

flowing into lake Tana at its east shore

Female traveller around 1960: "I came suddenly on the Reb which was a deep muddy gash in the plain. The bank fell away sharply to the water below which made its way through grey alluvial silt. I stopped the car and went down to test the ground. The bank opposite looked reasonably firm, so climbing back into the car I drove to the edge. We dived sharply off the bank, and, as we ran to the base of the river, the weight of the rear swung the back wheels sharply to the left in a bad skid. With a sickening squelch she sank deep in the wet mud. The wheels began to spin and I was completely stuck!"

"Half an hour later I had moved most of the cargo out of the vehicle and was completely covered with mud. The Land-Rover was a few inches further down in the mud, and now, on the high bank, a row of boys stood watching me with interest. -- Finally I beckoned the spectators towards me and set about organising a line of workers to bring stones to make a quarry. It would take a day or two and probably use up whatever money I had, but it was my only chance."

"At this moment two men in a red jeep appeared at the top of the other bank. -- It was an I.H.A. vehicle and the men were making a dash for Gondar to pick up a spare part for a lorry. The driver, a Sudanese, greeted me with a wide grin. 'You are lucky,' he said, 'you might not see a vehicle here for weeks.' -- They put a tow-rope on the Land-Rover and she was out in a matter of minutes.

[Barbara Toy, In search of Sheba, London 1961 p 168-169]

Later a helicopter used to carry Barbara to spend a night on the top of the 'prison mountain' Wehni landed near Reb river before the final flight.

[Toy p 223-224]

rebbi (A) cattle breeding; (räbbi) rabbi, master

ribbi (A) fertile

HFE76 Rebbi Arienni (R. Erienni) (hill/pass) 2243 m 14/39 [Gu n]

> An imposing block of granite jutting up beside the road. It was from here that the Italians began the last stage of their march into Adwa in 1896.

> Just past the peak of Rebbi Arienni is a small valley north of the road. In this valley is the site of Yeha with an important ancient ruin, a 10 km trip.

[Welcome to Ethiopia, A.A. circa 1965 p 171, 173]

The track heads off past the foot of an immense basalt peak. After about 3 km the village of Yeha appears, dominated by the ruins of a temple.

[Pankhurst 1997]

rib (A) buttocks /colloquial/; *ras* (A) head, cape, promontory; *raas* (Som) dwelling; family, household

HEK21 **Rib** (Rib Ras, Reb, Irb) estuary at 11°59′/37°34′ 11/37 [Ch WO Gz] River with its outlet in eastern lake Tana.

"Our next camp /April 1933/ was at the estuary of the Rib River. We found that the lake was extremely shallow with a floor gradually shelving away from the land, and a mile out we were punting in four feet of water. Fogara villagers cultivate some of the land at the lake-level. -- Along the shore-line there was a broad belt of maize, which is sown on the damp ground as the lake recedes."

"The Rib brings down quantities of dark sand, and we passed banks of it deposited on the lake shore. The river bar, 600 yards out in the lake, is a semicircle, and parties of travellers with loaded donkeys were passing round it instead of crossing the river. It made a firm sandy road covered by two feet of water --"

"Two miles up the Rib there is a *tankwa* port on one of the most important trade routes for lake traffic. Merchants of Ifag, a small town near by, load bars of rock-salt at the village. - We had met several fleets of as many as a dozen *tankwas* loaded with salt-bars on this route. They follow the coast at first and then strike across the open water to Zegi. On the return journey the cargo would be Zegi coffee --"

"Not many years ago this was the route much used by slave-traders, who brought their victims openly from Southern Abyssinia, crossed the Blue Nile at the ford below Gumr Market, used the returning salt *tankwas* to take them over Lake Tana, then went to Ifag and from there to the Danakil deserts with the caravans engaged in the salt trade, and from the Red Sea coast by dhow to Arabia. -- In the last few years this and other slave-trade roads have been closely watched by specially appointed Abyssinian officials -- and it is doubtful whether at the present time the routes are used for any but legitimate trade." "Fifteen miles /24 km/ from the estuary the Rib is crossed by a masonry bridge that carries the old royal road from Gondar to Debra Tabor. -- the similarity between its style of architecture and that of Portuguese bridges in the country leaves little doubt that it was built by the Jesuit Fathers or the artisan that accompanied them --"

(centre in 1964 of Weremu & Wajitu wereda)

HEJ09 Rima (island in lake Tana) 11/37 [Ch Gu]

The church also described above as Remha Medhane Alem.

March 1933: "-- fifteen minutes' rowing brought us to the island of Rima, 300 yards in diameter and 20 feet high. On it stands another church of /Medhane Alem/. A book called *The History of Mary* states that it was founded in the reign of Isaac I by his brother Aba Nom, and rebuilt by Ras Gugsa -- Another volume, entitled *Monograph of Walatta Petros*, is probably unique. Walatta Petros, a nun, was tortured and chained up by the Emperor Susenyos -- because she refused to abjure the faith of her fathers and to take Mass as the Roman Catholics did. Her persecution ended when Fasiladas came to the throne -- Her coffin is in the Holy of Holies in Rima Church where she used to pary -- The bones of the Emperor Sarsa Dengel, Aba Nom, Abuna Bertlomaos, and the father of Walatta Petros, are also in the Holy of Holies at Rima. In the Kidist the bones of several nobles lie in massive coffins which are tree-trunks hollowed out."

Cheesman describes the stone bells, some pictures with European traits, and a tall wooden cross leaning against the wall, with a well-painted life-size figure of Christ.

"We were next shown a blue-and-white jar, several feet high, of Chinese porcelain, I think, which had been used to bring the entrails of the Emperor Sarsa Dengel from Sennar. He had died /1597/ of fever while fighting -- in the country now known as the Sudan -- On leaving Rima we were rowed across the water to the mainland and spent the night below Gugebi, a volcanic hill with lava-cores exposed --"

[Cheesman 1936 p 168-170]

On a promontory is the church of Tima Yohannis.

8SW Azazera (village) 2227 m

7NE Tullu Shato (T. Sciato) (hill) 2560 m

The town of Robe lies on the main Goba road 25 km past Dinsho and 13 km before Goba itself. It is a large town with adequate facilities, but strangely subdued and nondescript, straggling for a couple of kilometres along a eucalyptus-lined main road. There are few compelling reasons to stay in Robe, unless perhaps you are heading to Sof Omar.

[Bradt 1995(1998)]

The Negus Sahle Selassie primary school (in Ticho awraja) 1960s

in 1968 had 479 boys and 152 girls, with 10 teachers.

/this Robe?:/ An elementary school building constructed of concrete elements and with Swedish assistance through ESBU was completed around 1970.

1970s With sub-post office using spelling ARUSI ROBE in its postmark, and with petrol filling stations of Shell and Total (-1978-).

1980s Population about 11,300 in 1984.

There is a Bekele Molla and a variety of other hotels at Robe. The road to the Sof Omar 1990s caves is easy to find - it goes from the only traffic circle in Robe - just ask the direction to Goro /about 60 km east/.

[John Graham in AddisTribune 2000/01/06]

Finding transport out of Robe towards Dodola can be difficult as most buses come from Goba and will be full when they pass through Robe.

The Bekele Mola Hotel is, for once, well signposted on the Goba side of town. Another above-average hotel - I'm told it's called the Metaforak Hotel but there are no signposts to confirm this - has rooms with private cold showers and toilet. If asking for it by name proves unproductive, it's on the Dinsho side of town. Otherwise, there's the usual selection of mostly anonymous dollar-a-night affairs.

[Bradt 1995(1998) p 196-197 with town plan sketch]

[Aubert 1999 has an area map on p 78]

With police station. Airport is nearby in Goba.

The Teacher Training Institute for Bale used Oromo as language in the 1990s.

Population 21,138 in 1993 (estimate) and about 26,500 in 2001.

Robit (Shewa Robit, "Shah Robit") HDU17

10/39 [MS Br Po x]

By going 4 km along a track from Shewa Robit and then walking for about 40 minutes

one can reach the locality Gozie, where there is a mosque built of masonry.

1960s The 1967 telephone directory gives six numbers, of which one for the prison and one for Virginia Tobacco experimental & processing station. Those on personal names are for Belayhun W/Amanuel, Gabre Yelem Wossen, Teshome Armidie, Wagaye Kelile.

1970s With sub-post office and petrol filling station of Agip (-1978-).

Population about 9,800 in 1984. 1980s

> June 1985: "Shah Robit is a one-street town of ramshackle adobes. The hotel we visited was made of mud with straw on a wood frame, walls stuccoed or painted, roof of corrugated iron. Doorways were small and crooked but there was electricity, a refrigerator and a shower. Children and chickens roamed everywhere. -- Except for the people, this could have been India or Egypt or Colombia or Bolivia."

[P M Sutton, Ethiopian journal, USA 1986 p 62]

1990s Population about 14,300 in 1994 and about 17,600 in 2001.

Some of the Argobba ethnic group are said to live there around 1990.

Robit and Debre Sina are both significant towns, but Debre Sina looks

the more interesting of the two.

[Bradt 1995(1998)]

Robit has a colourful market on Wednesdays, attended by people as far away as 50 km. Passing over the Robit river, the road /towards Debre Sina/ gradually ascends from the Rift Valley floor, through cultivated areas where sorghum, maize, cotton, and tobacco are

Robit (town) 12°21'/37°22' 1827 m, north of Gorgora [Gz] **Robit** (Welo Robit) 12°01'/39°38' 1823 m 12/39 [Gz Po Ad]

(sub-post office under Dessie)

(centre in 1964 of Kalim sub-district)

/This Robit?:/ Population 939 as counted in 1967.

The primary school (in Raya & Kobo awraja) in 1968

had 61 boys and 24 girls, with two teachers.

After having crossed the bridge over the Alehuwa torrent, the road reaches

the Gobiye pass from where it descends to the village of Robit.

Next you come to Kobbo.

[Aubert 1999]

Area at the left bank of Mareb river at about 14°40'N.

Mansfield Parkyns arrived there in the beginning of October 1843 and stayed for nine months. Coming from the south they passed a village called Inda Maryam from its church /same as HFK07?/. They passed several other villages and remains of villages. For water, these depended on wells dug in the sand of dried-up watercourses. The principal villages were HF... Tokulimni, HFD78 Adi Nebried (A. Nebrit) and HF... Mai Chena. When approaching the Mareb valley they climbed a very steep hill. "Near the top of it we found a pretty little hamlet, called Addy Harisho, where we were hospitably and comfortably lodged by the lay-dean and chief of the district, Apha-Memher Waddy-Hil."

[M Parkyns, Life in Abyssinia, vol I, London 1853 p 257-259]

"Rohabaita is a small district or province belonging to the Church, but in some measure dependent on the chief of Addy-Abo. It consists principally of a cluster of hills, bounded on the eastern side by the valley of the Mareb, on the west by Addy-Abo, south by Médevai /HFD97 Medebay/, and north by the country of the hostile Shangalla. The villages are built principally near the summits of the hills, from fear of the sudden attacks of their enemies, and of the fatal malaria which at certain seasons of the year prevails in the low valleys. -- A few acres of millet are sometimes cultivated on the mountain tops near the villages, but in quantity very insufficient for the wants of the population. The low plains -- are therefore employed for this purpose."

Parkyns was offered by Dejazmach Lemma "the government of Rohabaita and another neighbouring district" and would have been very willing to try such a position, but as he left Ethiopia before it could start, nothing came out of the offer.

[Parkyns p 263-265]

HDD35 Rogghie, see Shuna

roka (roqa) (A,O) kinds of shrub or medium tree, Tamarindus indica, Trichilia roka; tamarind has a compact rounded crown with drooping branches that reach near to the ground; *rokaa* (roqaa) (O) rancid, rotten, bad /food/

?? Roka (stream west of Dabus)

The Sandvik expedition around 1930 found traces of much gold washing at the Roka, not far from what was called 'Copper Camp' on a British map. They knew of the mining activities of the Englishman Digby a little after year 1900. Digby was said to have left via Roseires with 200 porters carrying samples of ore.
