	<i>kilb</i> (qilb) (A) beauty, intelligence		
??	Kilba, area in the south-west? Tekele Wolde Hawariat went to Gore to meet Ras Imru, but Imru was taken prisoner by the Italians. In July 1937 Tekele's group went to Kilba to join the Shewa Patriots, who included Ras Mesfin Sileshi and the former chief of police Abebe Aregay. Before having finished the welcome meal they were attacked by a force commanded by General Belini and supported by Ras Hailu. By midnight the Italian attackers were defeated. The guerrilla moved in a westerly direction towards the Sudan. Tekele was elected to coordinate the military operations. HBP.?	Kindo An area in the Sodo coal fields of Sidamo. It lies on the south-west flank of the Gumbacha ridge bordering the Omo canyon to the north and west and the Deme river to the south. Disintegration and erosion have made the land surface very rough. A divide between the Kindo and Challe valleys is about 3 km wide and capped by volcanics. High peaks and ridges are made of mainly trachytic and tuffaceous volcanic rocks. Sediments are probably pre-volcanic or at least intravolcanic. Volcanic intrusions have produced steeply dipping sediments. There are some carbonaceous seams in Kindo valley. The total coal in the seams was roughly estimated at about 20%, It consists mostly of thin laminations in the shale. None of the seams examined were of any commercial importance. ??	Kishe The diplomat Henze made observations of a resettlement project when visiting Kishe in Kaffa on 16 March 1987:	../..	[20]

-- looking at this group in their blue party uniforms and tan bush suits, all with new wristwatches and good leather shoes -- I was struck by the contrast between them and the settlers whom they were sent to 'serve'. -- Kische is operated as a state fief. Everything goes from the top down. -- The Derg's aim is obviously to turn the resettlement areas into vast Soviet-style state farms."

[P B Henze, Layers of time, London 2000 p 310]

| | 1929: "Kitar is an outlying cone-shaped hill on the Wanbera south slopes, and the villages clustered round the base of the hill present a glorious vista of mountain scenery. It is more densely populated than most Abyssinian districts, and there is much cultivation, the coffee of its gardens being famed throughout Abyssinia. -- We camped in the midst of the gardens at 6500 feet /not quite 2,000 m/ above sea-level." | | |
| | "-- we went to the top of Kitar cone, a 2000-foot climb, doing the first 1000 feet by mule and the rest on foot. The cone is composed of rocks of blue granite. -- survey work was defeated by smoke from grass-fires --" | | |
| | "On the top of the cone the old fortifications of the Shinasha are still visible along the crest where a rampart of rocks was erected. We were informed that when four generations ago the Gallas from Wallega crossed the Abbai and invaded Wanbera, they stormed Kitar hill with spearmen but were defeated by the Shinasha. They came a second time, led by their King Jelo Wabi, who drew up his troops in two columns. While one made a frontal attack against the ramparts, the other, led by the King, came round to the east and up the hill, getting in at the back of the Shinasha and routing them. Thus the Galla took possession of Kitar and the Wanbera highlands, driving Shinasha to lower lands." | | |
| | "The Kitar coffee plants were brought by the Gallas from Wallega. It is considered superior to the coffee of Zegi and fetches a higher price. In Kitar the plantations are exposed to the sun, whereas in Zegi the crop is grown under the shade of tall trees -- The crop was being gathered when we were in Kitar. The berries are taken to the houses and dried in the sun to remove the husk." | | |
